LOVELOCK'S

AMERICAN

STANDARD OF EXCELLENCE

FOR

PURE-BRED CATTLE, SHEEP AND SWINE,

BEING A COMPILATION

OF THE "SCALES OF POINTS" ADOPTED BY THE DIFFERENT PURE-BRED LIVE-STOCK BREEDERS' ASSOCIATIONS OF THE UNITED STATES.

"Every animal should be judged by the standard established by the association of the breeders of that class of animals. * * * * * No one need say that any intelligent breeder, of any class of thoroughbred animals, with the standard of characteristics and the scale of points as a chart, cannot judge fairly and profitably, animals bred for the same purpose as his."—Col. F. D_{τ} Curtis.

FRANK A. LOVELOCK, EXPERT JUDGE,
SALEM, VIRGINIA.

1893.

Entered according to Act of Congress, in the year 1893, By FRANK A. LOVELOCK, Expert Judge, Salem, Virginia, In the Office of the Librarian of Congress, at Washington.

SALEM, VA.:
THE TIMES-REGISTER BOOK AND JOB PRINT,

PREFACE.

It is now probably some ten or twelve years ago since the editor of this book first became acquainted with "The American Standard of Perfection" for poultry, a work for which his respect and admiration have steadily increased as he has witnessed year by year, at the different poultry shows throughout the country, the skillful work of intelligent expert judges, in determining the merits of competing specimens, by comparing them with the points of excellence laid down in that most reliable authority. Nor has it been only in the show room that the true worth of this perfect poultry guide has been tested, for there is not a careful breeder of pure-bred poultry in America to-day, but who turns with the same regularity for counsel and advice to his "Standard," as the Christian does to his daily guide, the holy Bible. All disputes in competition are settled by the "Standard"; prizes are won by selecting those specimens which approach nearest in excellence to the hundred points of perfection laid down in the "Standard"; buyers purchase those birds which score highest according to the "Standard": breeders mate their birds according to the requirements of the "Standard," and, inasmuch as the "Standard of Perfection" in poultry is the result of the combined experience and thought of the foremost breeders in the country, so the specimens which in excellence approximate nearest its requirements are considered the best specimens of their breed.

Seeing then, how good a thing was this "Standard of Perfec-

tion" as applied to poultry, the editor, who was formerly a breeder and exhibitor of pure-bred live-stock, often thought that a standard of excellence for pure-bred cattle, sheep and swine, if approved by the respective breeders' associations, would be equally as helpful to the thoughful breeder or judge of pure-pred livestock, as those recognized as authorities by the poultry breeders of the United States. At that time it did not occur to the editor of this book to correspond with the secretaries of the different breeders' associations, but, later, after he had commenced his career as expert judge at the Fairs, he gradually obtained the standards of excellence from the aforesaid secretaries, and soon realized that they were of inestimable value in making awards. After having studied them all carefully, the editor is of the opinion that whilst improvements could be made in a few of these, yet any one of them is a vast improvement upon the "rule of thumb" system, (?) for breeding or judging so prevalent throughout the Eastern States. Feeling, therefore, that breeders and judges of pure-bred cattle, sheep and swine would welcome a collection of these standards of excellence in one handy volume, as a guide, and for reference, education and comparison, the undersigned has, after considerable correspondence and study, obtained and systematized almost every standard of excellence ever adopted by any pure-bred live-stock association in America. He trusts that it may become to the breeders and judges of pure-bred live-stock as useful as the "Standard of Perfection" is to the countless breeders of poultry throughout the country.

The undersigned, knowing full well that he could hardly emphasize sufficiently the great need for better judging at Fairs, has taken the liberty of re-publishing from that well-known publication, "The Country Gentleman," an essay upon this topic from the facile pen of the late illustrious Col. F. D. Curtis, which appeared in that excellent weekly, and which should be read by all.

FRANK A. LOVELOCK.

SALEM, VIRGINIA.

A Reform in Judging at Fairs.

EDS. COUNTRY GENTLEMAN-A fair, to fill its full mission, should be educational. When shows simply excite wonder, and only fill gaping mouths with a passing interest, there is not much instruction about them, and very little knowledge is carried home to stimulate improvement and provoke emulation. In all needed reforms, I am not particular about the way it may be done, provided it is done. How shall fairs be made more than an attraction for sight-seeing and the pleasure of meeting each other? It may be urged that there are reasons enough for holding fairs. I grant it, for the past, perhaps, but not for the future. Agriculture must stand in the immediate future upon broader and deeper foundations. There is too big a tide against it to enable it to move with so little power. The propelling force must be stronger, to push our business along in competition with others. The fair must be made more of a factor for instruction and improvement. As now conducted, the "picking up" system of getting judges is too common. This should never be done. None but experts should ever pass upon the merits of goods or animals. By experts I do not mean cranks or ax-grinders. Such men are always out of place, where opinions are asked. There is too much warp in their make-up.

There is a class of experienced and honorable men in every trade, farmers and stock-breeders not excepted. These are the men who should be invited to do the judging, and they should be well paid for it. It is unnecessary to have three experts, as one is ample. The old style judges were generally friends of the powers that be, and while this was no disqualification, it was not an equipment for skill and judgment which specially fitted them for this important and delicate work, nor would it carry much weight with exhibitors and lookers on.

In the West, where fairs are fairs, there is a rapid tendency towards the one-judge plan, and he a man "known and read of all men" in the special line in which he is called to act. Such judging must be instructive, and far in advance of the awards made

upon the "picked up" plan. The judging at some of our State fairs, where we expect a higher grade than at a county fair, is often simply a burlesque. At a State fair recently held, one of the judges, who assumed a degree of arrogance and importance equal to several ordinary men, and wisdom superior to several ordinary owls, did not know anything about swine herd-books or standards, or requirements of associations to constitute thoroughbreds, but he "knew a good hog and one which suited him." Under the dictation and awards of such a judge the exhibitors of all breeds stood back in disgust, and let the thing run. How much could any one learn from such decisions in regard to the characteristics or qualities of any breed or the valuable and best features in breeding?

I would make the exhibit of as great practical value as possible, as this would add to the attractions of the fair. When people found out that teaching by object lessons would take place, and by noted and accepted teachers, they would flock around the rings where stock, was being judged, and the pens, to compare the points and evidences of value. To make all the lessons of the exhibition of animals merely a sight, with printed records to follow, is not the full measure of an agricultural fair of any pretensions. We must get more out of it. The wheels of time now grind too close for so small a return. My idea is that each and every exhibition, especially of live stock, should be a school of thorough object teaching, to be added to all the other and stereotyped impressions. Every animal should be judged by the standard established by the association of the breeders of that class of animals. The standard should be publicly announced, and each animal tried by it, and its superiority over another, or where it may be equal, stated orally; so that those looking on, and the breeders, may see the value of good points and learn how to distinguish them. No one should be allowed to talk back or interfere, but let the judge give reasons for his preferences, and point out the blood markings and perfect features. This kind of judging is no mere dream; its practicability has been demonstrated. This little taste of common sense in judging has made a keen appetite for a full meal. judges must not be breeders of the same kind of animals, but of other breeds bred for the same purpose. It is difficult to get experts, breeding Jerseys, for instance, who are not identified with some family of this breed, and hence, however high-minded, they

would be liable to be accused of leaning toward their favorites. The same criticism might follow with the judges of sheep or swine or horses. Let us have a new track, and see if it will not carry us smoother and better than any old rut. Take the judges for any accepted butter breed from the breeders of butter breeds—from Jerseys to judge Guernseys, Ayrshires to judge Holsteins, and beef breeds in the same way—Short-Horns to judge Herefords—following the same rule with the Polled cattle. The same mismatching should be followed with the breeds of swine, giving, for instance, the Berkshire breeder dominion over the Duroc-Jersey, and the Chester White over the Poland-China, or one judge over each class, classed as large and small—this judge being taken from a class he does not breed.

The fine wool sheep-breeders will oppose a one-judge and an outside man, the strongest, for they have a conceit that a coarse or middle-wool breeder does not know anything about Merinos. Why not? Is there any unfathomable mystery about the breeding or appearance of Merino sheep? The truth is, there ought to be a little more of the middle-wool brains in them, and would it not be a wise thing for the sheep, and the breeders also, to pass in review before the breeders of larger sheep and those bred for a double purpose? There has been too much of the one-idea, or hang-on with the breeders of Merino sheep. They want to get out of it. I should consider it a privilege to have my Merinos judged with the Merino standard by a wide-gauged, middle-wool breeder, and why not the sheep of this last class by a close-texture, fine-staple, bigdewlap, compact-body and hardy-constitution, Merino-educated eye and brain? Sheep must now, of all stock, be bred for utility, and they must stand on their merits while in the hands of the farmer. The protection, trusts and inflation will come when out of the farmer's reach. No one need say that any intelligent breeder, of any class of thoroughbred animals, with the standard of characteristics and the scale of points as a chart, cannot judge fairly and profitably animals bred for the same purpose as his. Such an objection would be a reflection on the intelligence and sound judgment of the breeder. If it may in part hold good, it is a possibility for better results, than with "pick-up" judges, or those expert in their kind, with an inevitable round of dissatisfaction on account of possible prejudice or favoritism.

Kirby Homestead, New York.

GALLOWAY CATTLE.

Standard of Excellence for Galloway Cattle, compiled by L. P. Muir, Secretary of the American Galloway Breeders' Association, Independence, Mo., from a detailed description drawn up in 1883 by the Council of the Galloway Society of Great Britain. [This standard was kindly sent to me by Mr. Muir at my request, for this publication, and only to be used until the American Galloway Breeders' Association shall adopt one of their own.—Ed.]

HEREFORD CATTLE.

In answer to an enquiry from the editor of this publication, Mr. C. R. Thomas, of Independence, Mo., the secretary of the American Hereford Cattle Breeders' Association, wrote that the association had not adopted an official standard of excellence, but advised the editor to apply for one to Mr. S. W. [Anderson, of Asbury, W. Va., who is quite a large breeder, and is considered a good Hereford judge. Acting upon the suggestion of the Secretary, the editor corresponded with Mr. Anderson, who thereupon kindly furnished the following standard of excellence for Herefords.

DETAILED DESCRIPTION.

COUNTS.

1. COLOR.—In color the Hereford should invariably be a red (either light or dark), with white face, throat, chest, lower part of the body and legs, together with the crest or mane, tip of tail; and, generally a white strip along the withers,

POINTS.

2. Head.—The bull should have a good masculine head; broad between the eyes, which should be full and lively. The countenance should present a placid appearance, denoting a good temper and that quietude of disposition so essential to the successful grazing of all ruminating animals. The cow's head should be much the same, but finer. The nose should be a pure white or flesh color. The cheeks

| | and throat should be full, with tongue root large and loose. | 10 |
|-----|---|-----|
| 3. | HORNS.—The horns of the bull should be large at the butt, | |
| | and a good length is not objectionable. Those of the cow | |
| | should belong, but much smaller. The horns of either | |
| | should be waxey white, although they are occasionally | |
| | found dark at the points, | 4 |
| 4. | NECK.—Short and meaty, and well set on the shoulders, | 4 |
| | Shoulders.—Deep, sloping, thick and fleshy. So beauti- | |
| | fully should the shoulder blades blend into the body that | |
| | it would be difficult to tell in a well-fed animal where | |
| | they are set on, | 6 |
| 6. | HEART-GIRTH.—Full and deep in foreflank behind the arm; | |
| | full behind the shoulders without depression, and broad | |
| | k ' | 10 |
| 7. | CHEST.—Expanded, deep and full; well covered on the out- | |
| | side with mellow flesh, | 6 |
| 8. | Brisket,-Well developed, and projecting firmly from be- | |
| | tween the legs; proportionately covered with flesh and fat, | 4 |
| | RIBS.—Well sprung, wide, and evenly covered with flesh, . | 8 |
| 10. | BACK.—Straight and level from crops to hips, which latter | |
| | should be moderately broad; loin, strong, wide and deep, | 12 |
| 11. | HINDQUARTERS.—Should be long from the hip back; the | |
| | rump forming a straight line with the back, and at a | |
| | right angle with the thigh, which should be full of flesh | |
| | down to the hocks; twist good, well filled up with flesh | |
| | even with the thigh, | 8 |
| | TAIL.—Well set on and falling in a plumb line to the hocks, | 5 |
| 13. | Underline.—As nearly straight as possible; the flank full | |
| | and about on a straight line with the belly, | 4 |
| | LEGS.—Short and well apart; muscular hocks and knees, . | 4 |
| 15. | FLESH.—The whole careass well and evenly covered with a | |
| | rich, mellow flesh, | 5 |
| 16. | Size.—Minimum weight for bull at three years old, 1,800 | |
| | pounds; minimum weight for cow at three years old, | |
| | 1,500 pounds, | 4 |
| 17. | SKIN.—The hide, thick, yet mellow, and well covered with | |
| | soft, glossy hair, having a tendency to curl; the hide giving the impression when you touch it that it will stretch | |
| | to any extent, | 6 |

THE AMERICAN HOLDERNESS CATTLE.

The Holderness is a pure-breed of cattle raised for many years by T. A. Cole, of Solsville, N. Y., and numbering several hundred head, of excellent animals, Whilst no standard of excellence has yet been adopted for them, the following description by Lewis F. Allen, author of "American Cattle," will be of interest:

"Mr. Cole calls his cattle "Holderness," a name seldom heard of at the present day; yet several specimens of such a breed of cattle were imported 50 years ago into Massachusetts, to my certain knowledge, and I believe also into this State, and Mr. Knox, from whom Mr. Cole bought his original cow, stated that she was from imported stock, but who was the importer or how long ago the importation was made, was not ascertained. In Youatt's "Cattle, their Breeds and Management," published in London in the year 1834, in which the several breeds of England are described, is mentioned the "Holderness," existing in a district of that name, in the West Riding of Yorkshire. They are noted as great milkers, a branch probably [of the ancient unimproved Shorthorns, as they resemble that breed more than any other, except in color and rotundity of form.

The imported ones of fifty years ago were usually dark red or brown on the sides, striped with white on the backs and bellies, and occasionally a little spotted, and Mr. Cole's cows much resemble them in form and size. So there can be little if any doubt of the descent of the latter from the original importations. Yet a marked change in color has been developed in Mr. Cole's herd. His original-row was light red on her sides, with white back and belly. Her first bull calf and several succeeding ones of the herd were also of these colors. But gradually they began in calfhood, and in successive years, to turn the red into black, and now the color of nearly every one of the grown cows and bulls is a dark brown or jet black and white line-back. Why the colors are so changed is a physiological secret. The fact is positive, and their intense in-and-in breeding may have set them back to the color of their long ago ancestry in Holderness."

HOLSTEIN-FRIESIAN CATTLE.

Standard of Excellence for Holstein-Friesian Cattle, as adopted by the Holstein-Friesian Association of America, F. L. Houghton, Secretary, Brattleboro, Vermont; also by the American Branch Association of the North Holland Herd Book, F. H. Beach, Secretary, No. 6 Harrison street, New York; also by the Holstein-Friesian Association of Canada, G. W. Clemens, Secretary, St. George, Ont.

KERRY CATTLE.

In the United States quite a number of Kerry cattle have been imported from time to time, but as there is neither a Kerry Cattle Club, nor a Kerry herd book in this country, their valuable characteristics are not as fully recognized here as they should be. The cows are good milkers for their size (some weighing only 500 pounds), giving from 10 to 29 quarts daily, and, whilst, from the case with which they are kept in a limited space, they are often called the poor man's cow, they might just as truly be termed the rich man's cow, in that they are small and handsome, and so docile that they can be easily teffered on a lawn. The following Standard of Excellence, approved by Mr. Henry S. Ambler, of Chatham, N. Y., the principal breeder of Kerry Cattle in America, may be of assistance to judges and breeders:

| POINTS. | SCALE | OF | POIL | ITS | FΟ | R | KER | RY | CA" | TTL | Ξ. | | CC | UNTS |

| DETAILED DESCRIPTION. | |
|---|--------|
| POINTS. COUN | |
| 1. HEAD.—Fine and small and tapering, | 2 |
| 2. CHEEKS.—Clean, | 1 |
| 3. Throat.—Full, and well set, | 1 |
| 4. Muzzle.—Fine, and of a rich black color, | 2 |
| 5. Nostrils.—Well placed and rather open, | 1 |
| 6. Horns.—Well sprung; smooth; rather thick at base, but | |
| gently tapering; white in color, with black tips, | 2 |
| 7. Ears.—Small, fine, and of a fine, pink-orange color within, . | 2 |
| 8. Eyrs.—Mild and full, but animated, | 1 |
| 9. NECK.—Straight and fine; evenly and smoothly joined to | |
| the shoulders, | 6 |
| 10. Shoulders.—The height at the shoulders should not exceed | |
| 4 feet, though 3 feet 6 inches is more desirable, | 3 |
| 11. CHEST.—Deep and broad, | 6 |
| 12. BARREL.—Deep, full and well hooped, | 6 |
| 13. Ribs.—Well sprung, | 4 |
| 14. BACK.—Even and straight from withers to top of hip, | 2 |
| 15. Rump.—Rather narrow, long, but straight from top of hips | |
| · to setting on of tail. Thigh, light, | -6 |
| 16. Tail.—Long and fine, | 2 |
| 17. Skin.—Of good rich orange color; loose, mellow, and cov- | |
| | 10 |
| 18. UDDER.—Well rounded, full and capacious; in line with belly and well up behind, | 12 |
| | 10 |
| 20. MILK VEINS.—Very prominent, | 8 |
| 21. FORE LEGS.—Short and straight; full above the knee; fine | |
| below, | 2 |
| | 2 |
| 23. Hoofs.—Small | ĩ |
| 24. Color.—Rich black preferable, although there are some | |
| very good-animals black and white, and occasionally a | |
| few of other colors, | 3 5 |
| | _ |
| Perfection 1 | 00 |
| In judging bulls and heifers omit Nos. 18 and 20, | |
| The Dexter variety is distinguished from the pure or true Ker | ry |
| in having a round plump body, short and rather thick levs: 11 | he |

The Dexter variety is distinguished from the pure or true Kerry in having a round plump body, short and rather thick legs; the head is heavier and wanting in that fineness which marks the true Kerry, and the horns are longer, straighter and coarser.

RED POLLED CATTLE.

The following letters explain themselves and need no further introduction,

RED POLLED CATTLE CLUB OF AMERICA.

SECRETARY'S OFFICE, Dayton, Ohio, Sept. 22, 189 '. (

FRANK A. LOVELOCK, SALEM, VA.:

DEAR SIR: Your postal of the 20th received. No regular "scale of points" has been adopted for Red Polls. They should be judged, however, both for beef and dairy qualities, as they claim to excel in both lines.

The most desirable points are smooth, level form, much like the Devons, but larger. A deep, rich red color, without white, except the switch, and it may be a little white; a white spot on the udder. No horns or seurs; a fine head, clean throat, deep body; level rump, broad back or well rounded, and the points generally of a good beef animal.

Then for cows, a large udder and good milk veins, but not always prominent to the eye, on account of the thick, mossy coat of hair. The indications of a good milker, with smooth, compact form, fine bone, rich color, and good size are my own preference.

Very truly,

J. McLAIN SMITH, Secretary.

RED POLLED CATTLE CLUB OF AMERICA.

SECRETARY'S OFFICE,
Dayton, Ohio, July 4, 1892.

FRANK A. LOVELOCK, SALEM, VA.:

DEAR SIR—Yours of the 2nd received. The Club has not yet adopted any "scale of points," and no movement has been made

to that end. There are no changes to make in my former letter. I do not now remember just what I wrote, but I should make very emphatic the requirements of a good show for MILK. Other things being nearly equal, I should give decided preference to the cow showing best milking qualities. Where there is any claim to beef qualities, the strong tendency is to give beef the preference in a show ring. It ought not to be so with Red Polls.

Very truly,

J. McLAIN SMITH,

Secretary.

POINTS.

SHORT-HORN CATTLE.

Mr. J. H. Pickrell, of 510 East Monroe street, Springfield. Illinois, Secretary of the American Short-Horn Breeders' Association, writes the editor of this publication that his association deals primarily—with pedigrees and only incidentally with the animals, and has never made up a scale of points. The following standard of excellence, was compiled especially for this work by Col. A. M. Bowman, of Salem, Va., formerly of the firm of Palmer & Bowman (for many years owners of the largest herd of registered Short-Horns in the world), and an ex-member of the Board of Directors of the American Short horn Breeders' Association.

DETAILED DESCRIPTION.

COUNTS.

- 1. Head.—Short; forehead broad, gracefully narrowing along the face toward the muzzle; face slightly concaved, but not dished; eye prominent, but with mild expression. Fine, wide, open nostrils; color of nose, yellow or nutty drab; ear should be upright, large, and not too thick, but well covered with a mossy coat of hair,
- 2. Horns.—For bull, strong, but not coarse, standing wide at the base, bending gracefully forward in an outward

| | curve, and then may incline downward or upward, with waxy or creamy tint, rather than white, and no dark or black except at the tips. For the cow the same general character should prevail, except that the horn should be smaller and finer, | 3 |
|-----|--|-----|
| 3. | NECK.—Short, well set in the shoulders and tapering to the head, running back on a level in the cow, and with a gradually rising crest in the bull; free from dewlap or | 9 |
| .1 | hanging skin, | 3 |
| 1. | the shoulders, without depression, | 8 |
| 5. | SHOULDERS.—Broad and even at top, working backward into a level with the chine; smooth at forward points and | |
| | tapering gracefully to the knees, | 6 |
| 6. | CHEST.—Deep, broad and full, without coarseness; a deep, broad and full chest with some coarseness, is however, | |
| | prefered to a narrow chest, however smooth, | 8 |
| 7. | BRISKET Prominent, well set forward, almost perpendicu- | |
| | lar in front; broad and well let down, | 4 |
| 8. | Crops.—Broad and full without depression, , | 6 |
| 9, | RIBS.—Fore-ribs springing in a well rounded arch from the back-bone, long and deep; hind-ribs should spring well | |
| | out from the back-bone, long, deep and well set back towards the hips, | 8 |
| 10. | BACK.—Spine straight from chine to root of tail; loins | |
| | broad, full and level with the spine and hips; hips wide- spread, smooth and on a level with the spine; rump long, | |
| | full broad and level, | 12 |
| 11. | HINDQUARTERS.—Should drop perpendicularly from the points of the rump; thighs broad and full and running | |
| | well down to the hocks; twist broad and full and running | 1.0 |
| 10 | well down with a good covering of soft, silky hair, Tail.—Fine, strongly connected with the spine, on a straight | 10 |
| 12. | line, | 2 |
| 13. | $\label{thm:underline} {\tt Underline} {\tt As\ nearly\ straight\ as\ possible\ ;\ flank\ low,\ full}$ | |
| | and on a straight line with belly and brisket, | 4 |
| 14. | LEGS.—Front legs should be fine boned and stand well apart; | |
| | knees round and muscular. Hind legs straight, standing well apart, with a muscular hock and a fine boned, flat | |
| | | .1 |
| | leg below, | .1 |

| 15. Flesh.—Firm, evenly laid on, and free from lumps or | |
|--|----|
| patches, | 4 |
| 16. Skin.—Moderately thick, not so loose as to separate from | |
| the tissue beneath, but at the same time not tight. It | |
| should move easily by action of the hand, showing plenty | |
| of cellular tissue beneath. The touch or handling quali- | |
| ties should be elastic, mellow (not flabby) and springy. | |
| The hair should be close, long, soft, and mossy; the more | |
| of it the better, if of the right quality, | 0 |
| T | _ |
| Perfection, 10 | 00 |

POLLED DURHAM CATTLE.

For this breed a Standard of Excellence has not yet been adopted, but for the present, that for Short-horns may be used for judging them, in conjunction with the following registry requirements, adopted by the Polled Durham Breeders' Association, J. H. Miller, Secretary, Mexico, Illinois.

- RULE 1.—Animals for registry must be at least one year old.
- RULE 2.—Cattle to be eligible to registry must be calved hornless.
- Rule 3.—Color and markings characteristic of the Short-horn.
- Rule 4.—Animals to be eligible to entry must have seventy-five per cent. or more of Short-horn blood, but where there is a remainder of blood not Short-horn, it must be in part or all of the old native Muley strain.
- Rule 5.—Produce of animals already recorded, provided they conform to rules 1, 2 and 3.
- RULE 6.—The produce of any bull in the Polled Durham Herd Book, when out of a cow registered in the Short-horn Herd Book, provided they conform to Rules 1, 2 and 3.
- Rule 7.—The produce of any cow in Polled Durham registry when by a bull recorded in the American Short-horn Herd Book, provided they conform to Rules 1, 2 and 3.
- Rule 8.—After September 4, 1893, no animal shall be registered whose ancestors are not at that time registered, except under Rules 6 and 7, with less than fifteen-sixteenths Short-horn blood, in addition to requirements of Rules 1, 2, 3, and 4.

SUSSEX CATTLE.

Standard of Excellence for Sussex Cattle, compiled from particulars furnished by Overton Lea, of Nashville, Tennessee, owner of the principal herd of Sussex Cattle in the United States, and Secretary of the American Sussex Association, and approved by him.

| | | | | | | | | | | | | | | |

DETAILED DESCRIPTION.

COUNTS.

1. Color.—Solid red, varying from the light to the very dark red; sometimes the shades are mingled in the same animal, producing a dappled appearance. A little white about the udder is not objectionable in the cow. In both sexes, a few gray or white hairs scattered throughout the coat, sometimes so thick as to be easily noticed in spots, particularly upon the foretop, are regarded with favor rather than otherwise,

POINTS.

2. HEAD.—Decidedly neat in appearance; nose tolerably wide; muzzle bright, almost golden; thin between the nostrils and the eyes; eye rather prominent; forehead wide;

| | horns long, longer in cows than in bulls; heavier than in | |
|-----|---|-----|
| | the Devon, and without the Devon's peculiar waxy color; | |
| | clean and transparent with age, projecting at various an- | |
| | gles, similar to those of the Hereford—both with the same | |
| | angle or curve, however, unless distorted by accident, | 10 |
| 3. | Neck.—Short, strongly set on and clean, | ō |
| 4. | SHOULDERS.—Straight and without any projection at the | |
| | points, | 6 |
| 5. | Chest.—Wide, open and projecting forward, | 10 |
| 6. | Heart-girth,—Full and deep, | 10 |
| 7. | RIBS.—Broad and deep, and well sprung, | 8 |
| 8. | BACK.—Straight and level from the withers to the setting | |
| | on of the tail; loin and entire back full of flesh; hips | |
| | moderately large, but well covered, with a wide space be- | |
| | tween, and on a level with the back; rump long and | |
| | slightly sloping. | 15 |
| 9. | TAILWell set on, and dropping perpendicularly, | 2 |
| 10. | Legs.—Of medium length, | 4 |
| 11. | THIGHS.—Flat outside and full inside, | 6 |
| I2. | Skin.—Having a mellow touch, with soft and silky coat, | 8 |
| 13, | SIZE.—Medium weight for bull at three years old, 2,000 | |
| | pounds; same for cow at three years old, 1,500 pounds, . | |
| 14. | GENERAL APPEARANCE Stylish and well bred. The | |
| | walk square, the step quick, and the head up, | 5 |
| | Perfection, | 100 |

WEST HIGHLAND CATTLE.

Although quite a number of these picturesque and hardy little beef cattle have been sold to come to the states, there is no one at this writing who is known to be maintaining a breeding herd, but as the day is, perhaps, not far distant when there may be several herds in this country, the following detailed description is published:

The head should be beautifully proportioned to the rest of the animal; a fine head, with large tuft of hair on it; the nostrils full; the eyes large and liquid.

The horns should be lengthy, and should come level out of the head, inclining forward and upward; in the cow they should rise up with a graceful slope. Perfection in a cow's horns is of two kinds, according to taste, but some prefer them to come out level from the head, with a peculiar back-set curve and a wider sweep. In the bull the horns should be decidedly strong. The cow's horns rise sooner from the head and are a little longer, preserving their substance and rich color to the very tips.

The neck should be proportionate in length, clean below, and in cows forming a straight line from the head to the shoulders. In point of thickness it should be fully developed, and the bulls should have a crest.

The shoulders should be thick and immensely filled out downward from the point to the lower extremity of the fore-arm.

The back, from the very back of the shoulder, should have a fully rounded development; a hollow behind the shoulder is exceedingly objectionable. Across the hips there should be great breadth; while from the hips backward the quarters should have a very large development, being square betwixt the hips and the tail and betwixt the tail and the hind feet. As in the foreshoulders, the hind thighs should have an immense development.

The tail should be thick and strong, with a full bunch of hair hanging down toward the ground.

The bone, both in the fore and hind legs, should be thick, broad and straight; the hoofs large and well set on, and the legs feathered with hair. There should be great breadth betwixt the fore-

legs, and the animals should walk with great dignity of motion; indeed, unless an animal possesses this dignified style of carriage, he will have small chances of winning prizes in the show-ring.

The hair should be long, with a graceful wave in it, but a curl in it is a decided fault. The lack of wave in the hair is considered to be a great objection in many of the modern herds, though it is to be accounted for by the growing desire to make Highlanders grow big, and consequently from too careful treatment.

The whole points of the animal have to be considered in the light that he has to make a living in a bare and storm-exposed locality; that, indeed, he has to thrive where a Polled Angus or an Ayrshire would starve.

The question of thickness of skin, where fat, is one which is not left out of consideration; as in other animals, the sweetest beef being, as a rule, that under the thinnest skin. But a West Highlander with too thin a skin would not thrive well on a side of a wind-swept bill.

As a rule the color is black, but fashion now runs on yellow or light duns and on brindles. A well arranged herd should have a mixture of colors, avoiding all those which indicate unhealthy thrivers. A well marked brindle bull is; however, all things being equal, a difficult one to beat at any North British show.

It must always be borne in mind that the Highlanders are one of the most ancient breeds of cattle; that they are a combination of great hardiness with splendid quality of meat, which latter commands the highest price in the principal English markets. At all times they look by far the most noble of the bovine race, whilst their picturesque appearance makes them a handsome addition to the woodland scenery of large estates."

GOATS.

How to Judge Wool On the Sheep's Back.

IN Henry Stewart's "Shepherd's Manual," page 154, will be found the following excellent advice as to how to judge wool on the sheep's back:

"To determine the evenness or uniformity of the fleece, the shoulder is first examined. Here the finest and best wool should be found. Taking this as the standard, the wool from the ribs, thigh, rump and breech is compared with it; the nearer the latter approaches this in quality, the better. If it is all equal in fineness, the fleece will be "EVEN" in regard to fineness. If the wool on all the parts mentioned is reasonably regular in length, and near to the standard in this respect, the fleece is "EVEN" as regards length of staple. The density is then tested. The hand is closed upon a portion of the rump and on the loin, and if the fleece is found to be as dense and elastic, or springy on those parts as it is at the shoulder, the fleece is "EVEN" as regards density. A perfeet fleece will be found of nearly equal fineness from the shoulder to the thigh; of nearly equal length at the shoulder, rib, thigh and back; of equal density on the shoulder and across the loins and free from any of the defects before mentioned."

In August, 1893, in a communication to the "Country Gentleman," Henry Stewart defined the positions of the different quali-

ties of wool upon the sheep, with the following illustration and explanatory notes:

"The wool from the centre of the sides, marked 1, is of the finest quality—At 2 and 3 the fleece becomes coarser and shorter, and as the breech is approached, at 4, this coarseness, and length, too, are increased. The most inferior part of the fleece is on the belly and brisket, as at 5 and 6, that on the legs, 7, being almost like hair."

CHEVIOT SHEEP.

Standard of Excellence for Cheviot Sheep, as adopted by the American Cheviot Sheep Breeders Association, R. L. Davidson, Secretary, Cooperstown, N. V.; also by the National Cheviot Sheep Society, J. A. Guilliams, Secretary, Fincastle, Indiana.

HIGHLAND BLACK-FACED SHEEP.

Whilst quite a number of these hardy little sheep have been brought to the United States, there has not so far been formed any Association of Breeders of them similar to those who watch the interests of other breeds. The following description from Henry Stewart's "Shepherd's Manual" will therefore serve, at present, in place of a "Standard of Excellence":

They are a horned breed, the horns of the ram being massive, and spirally curved. The face is black, with a thick muzzle; the eye is bright and wild; the body square and compact, with good quarters and a broad saddle. They are very muscular and active, and remarkably hardy, able to endure the privations incident to a life of continual exposure upon bleak and storm-beaten mountains. Only the heaviest snow-drifts, followed by thawing, freezing and crusting of snow, overcome them. The mutton of this breed is of peculiarly fine flavor, and the saddles are in great request. The carcass weighs about 65 pounds, and the fleece averages about 3 pounds of washed wool. The breed improves easily under the care of a judicious breeder, but the natural qualities of this sheep are such that it is fitted for a place where no others would profitably thrive, and a change in its character that would cause it to lose this quality would unfit it for its position, and deprive it of its chief value. How vast the room in our exposed mountain localities, or on our unsheltered northern plains for such a sheep as this; a race hardy and self-dependent, and that would produce choice mutton, and a fleece well adapted for rural manufactures of coarse cloths, carpets, blankets and rugs."

LEICESTER SHEEP.

A Standard of Excellence for Leicester Sheep has not yet been compiled in the United States, but the following description of the breed is taken from Vol. I. of the American Leicester Record, published in 1893, by The American Leicester Breeders' Association, A. J. Temple, Secretary. Cameron, Illinois.

"The Leicester has been bred in Scotland and the border counties of England for more than a century and consequently is not a "fleeting thing of a day," but a distinct breed, and for purity of breeding can compare favorably with any other breed of sheep. They are becoming more popular each year in the United States and Canada. One point of their popularity being the ready sale of rams at good prices for use in crossing on other breeds to produce early lambs for the market. The Leicesters mature very early and are of a good size; the rams weighing 250 to 300 pounds, and the ewes 200 to 250 pounds each, fine bone and very little offal, making them a profitable animal for market as well as for wool. The average weight of fleece is 10 to 15 pounds. Wool, 10 to 12 inches long, glossy, of firm fibre, and is conceded to be the best species of long or combing wool.

In appearance the Leicester is a fine looking animal, white in the face, eyes clear and prominent, ears well set and free from blue. Sometimes black spots appear on the ears, but are considered no disadvantage. The neck is set well into the shoulder, full and broad at the base; the shoulders deep and wide, breast full and broad and no uneven or angular formation where the shoulder joins the neck or back; deep in flank, quarters long and square. The legs are bare, being covered with hair rather than wool, and stand wide apart with no looseness of skin on them, bone fine and hard, legs of moderate length; straight on back and broad, light in the belly, nearly as straight below as above (showing light offal), noble bearing, style and action, and the best appearing of any of the long wooled breeds."

LINCOLN SHEEP.

Standard of Excellence for Lincoln Sheep, as adopted by The National Lincoln Sheep Breeders' Association, H. A. Daniels, Secretary, Elva, Michigan.

[The American Lincoln Breeders' Association, of which Lyman C. Graham, of Cameron, Illinois, is secretary, has not yet adopted a "Standard of Excellence."—Ed.]

American Rambouillet Merino Sheep.

Mr. L. G. Townsend, of Ionia, Michigan, Secretary of the American Rambouillet Sheep Breeders' Association, writes the editor that a committee of breeders of this valuable breed is preparing a scale of points and standard of excellence for adoption by the association, and that it will probably be ready in a few months.— In the meantime, the following description, published in the American Rambouillet Record, from the pen of Mr. Thomas Wyckoff, a prominent breeder, and one of the Board of Directors of the association, will be a safe guide:

CHARACTERISTICS OF RAMBOUILLET SHEEP AND THEIR WOOL.

AMERICAN RAMBOUILLET SHEEP should have large frame, large, strong bone, well rounded and symmetrical bodies, well up on legs, bright pink skin, always plain and free from wrinkles. Broad head, bright eyes, quick movement, broad backs and broad chests are indispensable.

These sheep have long been noted as a mutton sheep, their fine juicy flesh having no superior.

They are noted for their early maturity and quick-feeding properties, being fully equal to the down breeds in this respect.

The rams are usually well horned, but not always, and weigh at maturity from 175 to 250 pounds.

The ewes are noted as good mothers, heavy milkers, one-half usually producing twins. They weigh 110 to 150 pounds. Wethers attain 150 to 200 pounds,

Being strong, vigorous and healthy, their impressive power is very great, and they are not liable to constitutional break-down in service.

They will bear herding in large flocks, and their great hardiness permits them to stand all kinds of weather without housing.

Their fullness of carcass, brightness of look, length of body, vigor of carriage and great strength, make them excellent and reliable re-producers, and quick, healthy feeders on the range.

Rambouillet wool is of the finest quality, has a beautiful crimp, is usually white, sometimes of a buff color, very compact, opens

in large layers, has just yolk enough to promote a rapid and vigorous growth, shows no crust formation, seldom any jar hairs, and is always noted for its length, strength and elasticity.

It is from three to five inches in length, often six and one-half inches for one year's growth.

Rambouillet sheep should be well wooled to the feet and to the nose.

Rams shear annually from 12 to 24 pounds; ewes from 6 to 10 pounds.

The wool scours from 50 to 55 per cent. for the manufacturer, and no other Merino wool shows so deep a staple.

"No finer wool can be produced."

The fineness, length, soundness of staple, and remarkable freedom from grease have brought these sheep into deserved fayor.

American wools having this standard of excellence cannot fail to be in demand.

Black-Top Spanish Merino Sheep.

Standard of Excellence for Black-Top Spanish Merino Sheep, as adopted by The Black-Top Spanish Merino Sheep Breeders' Publishing Association. W. G. Berry, Secretary, Houstonville, Washington county, Pennsylvania.

DETAILED DESCRIPTION.

COUNTS.

| 1. Constitution, | 10 |
|---|----|
| Requisites—Robust; eyes bright; compactly built; head | |
| and neck on line with the back. | |
| Objections—A dull, languid look; loose, slabby make; slim | |
| neck; low on top; long, narrow face and curving | |
| back. | |
| 2. HEAVY AROUND THE HEART, | 6 |
| Requisites—The entire chest uniform in size, deep and | |
| rounding. | |

| | Objections—Pot-gutted; flat-shouldered; narrow between | |
|-----|---|----|
| | the forelegs, and high hip bones. | 0 |
| 3. | SHORT, HEAVY NECK, | 6 |
| | Requisites—Straight and short from the top of the head to | |
| | shoulder; deep and folded. | |
| | Objections-Long, round neck; concave on top and | |
| | smooth. | |
| 4. | GOOD DEWLAP, | 5 |
| | Requisites—Starting on top of neck near the shoulder and | |
| | widening on each side and hanging deep in front of | |
| | the forelegs, with small folds at intervals to back of | |
| | head. | |
| | Objections—Neck tucked up and narrow in front of fore- | |
| | legs; and back of the jaws round and straight on un- | |
| | der side. | |
| 5. | Broad Back, | 8 |
| | Requisites—Straight and flat from shoulder to tail. | |
| | Objections—Sharp on top; curying and drooping from hip | |
| | bones to tail. | |
| 6. | Well-Sprung Ribs, | 5 |
| ^ | Requisites—Starting at right angles from backbone; curv- | |
| | ing and deep, as long before as behind, making a bar- | |
| | rel-like chest. | |
| | Objections—Starting low and downward; flat and shorter | |
| | before than behind. | |
| 7. | | 6 |
| | Requisites—Straight; short and flat boned; standing fair | |
| | under the body. | |
| | Objections-Long; crooked; slender; drawn together; try- | |
| | ing to stand upon the least ground possible. | |
| 8. | HEAVY BONE, | 8 |
| | Requisites—Flat, broad-limbed; strong ribs; heavy shoul- | |
| | der blade. | |
| | Objections—Round, small limbs; narrow ribs. | |
| 9. | SMALL, SHARP FOOT, | 10 |
| | Requisites—Neat foot, well under the leg; wide at heel. | |
| | Objections—A clubby foot, growing long in toes; narrow | |
| | and close at heel; large foot joints, and standing for- | |
| | ward of the legs. | |
| l0. | LENGTH OF STAPLE, | 8 |

| Requisites—Uniform length all over the body, belly and | |
|--|-----|
| limbs to the knees, and covering the face square to | |
| the eyes. | |
| Objections—Growing shorter on sides and belly, bare on | |
| legs and face. | |
| 11. Density of Fleece, | 8 |
| Requisites—The fleece presenting a smooth, uniform surface. | |
| Objections—Opening up along the back, hanging in strings | |
| on shoulder, bare between the legs, and from the | |
| knees down, with a thin, open, light fleece. | |
| 12. Darkish Cast on Top, | 5 |
| Requisites—Uniformly dark on outer end of wool. | |
| Objections—Black, crusty top along the back, white and | |
| bare along the sides and belly. | |
| 13. OPENING UP WHITE | 5 |
| Requisites—Pure, soluble white oil evenly distributed | |
| along the fiber. | |
| Objections—Yellow, gummy, curdled oil, causing a black, | |
| crusty top, will not dissolve in washing, leaving the | |
| fleece when shorn, yellow and unsalable. | |
| | 5 |
| Requisites—Oil enough to protect the fleece, giving it a | |
| healthy and rich appearance. | |
| Objections—Oil in excess of wool. | ~ |
| 15. GOOD CRIMP IN STAPLE, | 5 |
| Requisites—Short spiral crimp, evidence of pure Merino wool, | |
| Objections—Coarse, harsh, stringy fiber, evidence of mixed | |
| or impure blood. | |
| Perfection, 1 | .00 |

DETAILED DESCRIPTION.

POINTS.

 BLOOD.—Tracing their descent to the standard bred flock of James McDowell, of Canton, Stark county, Ohio, (without admixture of impure blood), which flock descends directly from the thoroughbred flock of W. R. Dickinson, of Ohio, which were purely bred from Merino sheep imported from Spain to the United States by David Humphreys, of Derby, New Haven county, Connecticut, in the year 1802.

2. Body.—Deep, round, wide and long, showing mutton capacity, good feeding and thriving qualities; heavy, thick

| | flesh; straight under the top lines, well proportioned, | |
|------|---|----|
| | filling every part of its skin when fully matured | |
| 3. | Skin.—Thick, soft, not raised in corrugations, pink red, . | 4 |
| | HEAD.—Small, carried high; quiet, placid eye, | 4 |
| | Nose.—White, not mottled, covered with fine, soft white, | |
| | hair, wide and slightly arched, | 3 |
| 6. | EARS.—Short, thick; covered with fine glossy hair, | 3 |
| | Horns.—Small, neatly curved, light yellow color; better | |
| | without any horns, | 3 |
| 8. | NECK.—Short, arched under and on top; the base very | |
| | strong, , | 4 |
| 9. | SHOULDERS.—Wide, deep, rounded; breast bone projecting | |
| | forward of front limbs, | õ |
| 10. | BACK.—Straight, wide, ribs extending out horizontal from | |
| | spinal column, rounding in line with shoulders extending | |
| | close back to hips, | 8 |
| 11. | Loins.—Strong, wide, | 3 |
| | HIPS,—Wide, long, | 3 |
| | THIGHS.—Wide, thick; flesh extending close down to hock | |
| | joints, | 4 |
| 14. | LIMBS.—Short, bone heavy; joints smooth and flat, the | |
| | contour of to show perpendicular lines from elbow and | |
| | stifle joints to center of hoofs, and from base of tail to cen- | |
| | ter of a straight line drawn horizontally from caps of | |
| | hock joints, when standing erect on limbs, | 5 |
| 15. | Hoofs.—Deep, thin white texture, tough and elastic, | 4 |
| | SIZE.—Full-grown rams 200 pounds, and ewes, 150 pounds, . | 5 |
| 17. | INTERNAL ORGANS.—Strong, | 4 |
| 18. | MATURITY.—Mature early, two and one-half years, | 3 |
| | DENSITY OF FLEECE.—Smooth, even, dense soft to the | |
| | touch, | 6 |
| 20. | STAPLE.—Three to five inches, fibers glossy, crimped, | 4 |
| 21 - | -QUALITYXX, XXX or above, fine Delaine combing, | 6 |
| 22. | QUANTITY.—Rams, 15 to 25 pounds; ewes, 10 to 15 pounds | 6 |
| 23. | unwashed wool, | U |
| | grade of wool, except parts injuring thrift and comfort of | |
| | the sheep, entirely free from gum and hair. | 8 |
| 24. | OIL.—Very fluid, white or nearly so, enough to preserve the | 5 |
| | wool, raising to outer ends of fibers, | |

ANGORA GOATS.

In reply to a request, Mr. C. P. Bailey, of San Jose, California, the principal breeder of Angora Goats in the United States, sent the editor the following scale of points and detailed description, copied from the minutes of a meeting of the Angora Goat Breeders' Association, held September 22, 1887:

SCALE OF POINTS FOR ANGORA GOATS.

DETAILED DESCRIPTION OF ANGORA GOATS.

A perfect goat when in full fleece should appear like a parallelogram. The body should be full and long and of straight build. It should be densely and evenly covered with long, lustrous, fine, curly hair, appearing from a distance as if it had been trimmed off below the body. The chest and shoulders, especially with the males, should be broad and strong, and legs straight and chunky; the head clear cut and trim, not coarse like that of a common goat. The horns of the buck are long and strong, inclined toward the back, and of spiral like shape. The horns of the does, short and thin, and curved backwards.

In Mr. Bailey's descriptive circular it is stated that the average fleece of pure-bred goats is from four to six pounds, but frequently eight and ten pounds have been obtained from choice, well-kept animals.

| 16. Size, . | |
| Perfection, 100 | |
| DISQUALIFICATIONS. | |
| FORM: Upright ears; small, cramped chest; crease around bac of shoulders and over the back, causing a depression easily noticed feet broken down, causing the animal to walk on joints; deforme or badly crooked legs. SIZE: Chuffy or not two-thirds large enough for age. CONDITION: Squabby fat; deformed, seriously diseased; barrenness; total blindness. SCORE: Less than sixty points. PEDIGREE: Not eligible to record. COLOR: Black or sandy spots in hair. | 1; d |
| DETAILED DESCRIPTION. POINTS. COUNT | s. |
| Objections—Large; upright; coarse; thick; round; too small; drooping too close to the face; animal not being | |
| able to control them. 4. Neck—Wide; deep; short and nicely arched, | 2 |

not extending down to breast bone.

CHESTER WHITE SWINE

100

| 5 | 6. Jowl—Full; smooth; neat and firm; carrying fulness back | |
|-----|--|----|
| | to shoulder and brisket when the head is carried up level. | 6 |
| | Objections-Light; too large and flabby; rough and deep- | |
| | ly wrinkled; not carrying fullness back to shoulder and | |
| | brisket. | |
| 6 | . Shoulder-Broad, deep and full, extending in a straight | |
| | line with the side, and carrying size down to line of belly. | |
| | Objections-Narrow at top or bottom, not full nor same | |
| | depth as body; extending above line of back; shields | |
| | on boars too coarse and prominent. | |
| 7 | . Chest-Large; deep and roomy so as not to cramp vital | |
| | organs; full in girth around the heart; the breast bone | |
| | extending forward so as to show slightly in front of legs, | |
| | and let down so as to be even with line of belly, showing | |
| | a width of not less than 7 inches between forelegs of a full | |
| | grown hog, | 15 |
| | Objections-Narrow; pinched; heart girth less than flank | |
| | girth; too far let down between forelegs; breast bone | |
| | crooked or too short. | |
| 8. | . Back and Loin—Back broad on top; straight or slightly | |
| | arched; uniform width; smooth; free from lumps or | |
| | rolls; shorter than lower belly line; same height and | |
| | width at shoulder as at ham; loin wide and full, | 15 |
| | Objections—Back narrow; creased back of shoulders; sun- | |
| | fished shape; humped; swayed; too long or lumpy | |
| | rolls; uneven in width; loin narrow, depressed or | |
| | humped. | |
| 9. | . Sides and Ribs-Sides full; smooth; deep; carrying size | |
| | down to belly; even with line of ham and shoulder; ribs | |
| | long: well sprung at top and bottom, giving hog a square | |
| | form, | 8 |
| | Objections-Flat; thin; flabby; compressed at bottom; | |
| | shrunken at shoulder and ham; uneven surface; ribs | |
| 4.0 | flat and too short. | |
| 10. | Belly and Flank—Same width as back; full, making a | |
| | straight line and dropping as low at flank as at bottom of | |
| | chest; line of lower edge running parallel with sides; flank | 6 |
| | full and even with body, | 0 |
| | Objections—Belly narrow; pinched; sagging or flabby; | |
| | flank thin, tucked up or drawn in. | |

- 11. HAM and RUMP—Ham broad; full; long; wide and deep; admitting of no swells; buttock full; neat and clean, thus avoiding flabbiness; stifle well covered with flesh, nicely tapering towards the hock; rump should have a slightly rounding shape from loin to root of tail; same width as back, making an even line with sides. . Objections-Ham narrow; short; not filled out to stifle; too much cut up in crotch or twist; not coming down to hock; buttocks flabby; rump flat, narrow, too long, too steep, sharp or peaked at root of tail. 12. Legs and Feet-Legs short; straight; set well apart and squarely under body; bone of good size; firm; well muscled; wide above knee and hock; below knee and hock round and tapering, enabling the animal to carry its weight with ease; pasterns short and nearly upright feet short, firm, tough and free from defects, Objections-Legs too short; long; slim; crooked; too coarse: too close together: weak muscles above hock and knee; bone large and coarse, without taper; pasterns long; crooked, slim like a deer's; hoofs long, slim; weak; toes spreading, crooked or turned up. 13. Tail-Small; smooth; tapering, well set on; root slightly covered with flesh; carried in a curl, .
- Objections-Coarse; long; clumsy; set too high or too low, hanging like a rope.
- 14. COAT—Fine; straight or wavy; evenly distributed and covering the body well; nicely clipped coats no objection. Objections—Bristles; hair coarse; thin; standing up; not evenly distributed over all the body except the belly.
- 15. Color-White (blue spots or black specks in skin shall not argue impurity of blood), Objection's-Color any other than white.
- 16. Size-Large for age and condition; boars two years old and over, if in good flesh, should weigh not less than 500 lbs. Sows same age and condition, not less than 450 lbs. Boars 18 months old in good flesh should weigh not less than 400 pounds. Sows, 350. Boars twelve months old not less than 300 pounds; sows 300. Boars and sows 6 months old, not less than 150 bs each, and other ages in proportion, ... Objections—Overgrown; coarse; uncouth; hard to fatten.

ACTION and STYLE--Action easy and graceful; style attractive; high carriage; in males testicles should be readily

seen; same size and carriage,

| wark; in males testicles not easily seen; not of same | |
|--|---|
| size or carriage, or only one showing. | |
| 18. Condition—Healthy; skin clear and bright; free from | |
| scurf and sores; flesh fine and mellow to the touch; even- | |
| ly laid on and free from lumps; good feeding qualities, . | 4 |
| Objections—Unhealthy; skin scaly, scabby or harsh; flesh | |
| lumpy or flabby; hair harsh, dry and standing up from | |
| body; poor feeders; total deafness. | |
| 19. DISPOSITION—Quiet; gentle and easily handled; with am- | |
| bition enough to look out for themselves if neglected, | 3 |

Objections-Cross; restless; vicious or wild; no ambition.

PERFECTION,

Objections-Sluggish; awkward low carriage; wabbling

DISQUALIFICATIONS.

FORM: Ears standing erect; small cramped chest and crease back of shoulders and over back so as to cause a depression in the back easily noticed; seriously deformed legs, or badly broken down feet.

SIZE: Very small, or not two-thirds large enough as given by the standard.

Score: Less than fifty points.

PEDIGREE: Not eligible to record.

| POL | DETAILED DESCRIPTION. | TS |
|-----|--|----|
| 1. | HEAD AND FACE—Head small in proportion to size of body; | |
| | wide between eyes; face nicely dished (about half way be- | |
| | tween a Poland-China and a Berkshire) and tapering well | |
| | down to the nose; surface smooth and even, | 4 |
| | Objections-Large and coarse; narrow between the eyes; | |
| | face straight; crooked nose, or too much dished. | |
| 2. | EYES—Lively, bright and prominent, | 6 |
| | Objections—Dull, weak and obscure. | |
| 3. | EARS-Medium; moderately thin; pointing forward, down- | |
| | ward and slightly outward, carrying a slight curve, at- | |
| | tached to head very neatly, | 6 |
| | Objections-Very large; nearly round; too thick; swinging | |
| | or flabby; not of same size; different position and not | |
| | under control of animal. | |
| 4. | NECK-Short, thick, and very deep and slightly arching, . | 6 |
| | Objections-Long, shallow and thin. | |
| 5. | Jown-Broad, full and neat; carrying fullness back to point | |
| | of shoulders and on a line with breast bone, | 6 |
| | Objections-Too large, loose and flabby, small, thin and | |
| | wedging. | |
| 6. | Shoulders—Moderately broad; very deep and full; carry- | |
| | ing thickness well down and not extending above line of | |
| | back, | (|
| | Objections-Small; thin; shallow; extending above line of | |
| | back. Boars under one year old heavily shielded. | |
| 7. | CHEST-Large; very deep; filled full behind shoulders; | |
| | breast-bone extending well forward so as to be readily | |
| | seen, | 1: |
| | Objections-Flat, shallow, or not extending well down be- | |
| | tween forelegs. | |
| 8. | BACK AND LOIN-Back medium in breadth; straight or | |
| | slightly arching; carrying even width from shoulder to | |
| | ham; surface even and smooth, | 18 |
| | Objections-Narrow; creased behind shoulders; swayed or | |
| | humped backed. | |
| 9. | SIDES AND RIBS—Sides very deep; medium in length; level | |
| | between shoulders and hams and carrying out full down | |
| | to line of belly. Ribs long, strong and sprung in propor- | |
| | tion to width of shoulders and hams, | - |

| | Objections-Flabby, creased, shallow and not carrying | |
|------|---|----|
| | proper width from top to bottom. | |
| 10. | BELLY AND FLANK-Straight and full and carrying well out | |
| | to line of sides. Flank well down to lower line of sides, . | 6 |
| | Objections-Narrow; tucked up or drawn in; sagging or | |
| | flabby. | |
| 11., | HAMS AND RUMP-Broad, full and well let down to the | |
| | hock; buttock full and coming nearly down and filling | |
| | full between hocks. Rump should have a round slope, | |
| | from loin to root of tail; same width as back and well | |
| | filled out around tail, | 10 |
| • | Objections-Ham narrow; short; thin; not projecting well | |
| | down to hock; cut up too high in crotch. Rump narrow; | |
| | flat or peaked at root of tail; too steep. | |
| 12. | LEGS AND FEET—Medium size and length; straight; nicely | |
| | tapered; wide apart and well set under the body; pas- | |
| | terns short and strong. Feet short, firm and tough, | 10 |
| | Objections-Legs extremely long, or very short; slim; | |
| | coarse; crooked; legs as large below knee and hock as | |
| | above; set too close together; hocks turned in or out of | |
| | straight line. Feet-hoofs long, slim and weak; toes | |
| | spreading or crooked. | |
| 13. | TAIL—Medium; large at base and nicely tapering and | |
| | rather bushy at end, | 1 |
| | Objections—Extremely heavy; too long and ropy. | |
| 14. | COAT-Moderately thick and fine; straight, smooth and | |
| | covering the body well, | 2 |
| | Objections-Too many bristles; hair coarse, harsh and | |
| | rough; wavy or curly; swirls, or not evenly laid over the | |
| | body, | |
| 15. | Color-Cherry red without other admixtures, | 2 |
| | Objections—Very dark red or shading brown; very pale | |
| | or light red; black spots over the body; black flecks on | |
| | belly and legs not desired but admissable. | |
| 16. | Size—Large for age and condition. Boars two years old | |
| | and over should weigh 600 pounds; sows same age and | |

condition, 500 pounds. Boars, eighteen months, 475 pounds; sows, 400 pounds. Boars, twelve months, 350 pounds; sows, 300 pounds; Boar and sow pigs six months, 150 pounds. These figures are for animals in a fair show

| condition | 5 |
|---|----|
| Objections—Rough and coarse and lacking in feeding quali- | |
| ties. | |
| 17. ACTION AND STYLE—Action vigorous and animated. Style | |
| free and easy. | 4 |
| . Objections—Dull or stupid; awkward and wabbling. In | |
| boars testicles not easily seen nor of same size or carriage; | |
| too large or only one showing, | |
| 18. Condition—Healthy; skin free from any scurf, scales, | |
| sores and mange; flesh evenly laid over the entire body | |
| and free from any lumps, | 4 |
| Objections—Unhealthy; scurfy; scaley; sores; mange; | |
| too fat for breeding purposes; hair harsh and standing | |
| up; poor feeders. | |
| 19. DISPOSITION—Very quiet and gentle; easily handled or | |
| | 3 |
| Objections—Wild, vicious or stubborn. | |

3. Ears—Small; thin; soft; silky; attached to the head by a

POLAND-CHINA SWINE.

121

| short and small knuck; tips pointing forward and slightly | |
|---|----|
| outward, and the forward half drooping gracefully; fully | |
| under control of animal; both of same size, position and | |
| shape, | 2 |
| Objections—Large; straight; stiff; coarse; thick; round; | |
| long or large knuck; dropping close to face; swinging and | |
| flabby; difference in form, size or position. | |
| 4. Neck-Wide; deep; short, and nicely arched at top, from | |
| poll of head to shoulder, | 2 |
| Objections-Long; narrow; thin; flat on top; not extend- | |
| ing down to breast bone; tucked up. | |
| 5. Jowl-Full; broad; deep; smooth, and firm; carrying full- | |
| ness back near to point of shoulders, and below line of | |
| lower jaw, so that lower line will be as low as breast bone | |
| when head is carried up level, | 2 |
| Objections-Light; flabby; thin; wedge shaped; deeply | |
| wrinkled; not drooping below line of lower jaw, and not | |
| carrying fullness back to shoulder and brisket. | |
| 6. Shoulders—Broad; deep and full; not extending above | |
| line of back, and being as wide on top as back; carrying | |
| size down to line of belly, and having good lateral width, | 6 |
| Objections-Narrow; not same depth as body; narrow at top | |
| or bottom or extending above line of back; less than body | |
| in breadth at top or bottom portions, or lacking in lateral | |
| width; shields on boars under eight months of age, or | |
| large, heavy shields, on hogs under eighteen months of | |
| age. | |
| 7. CHEST-Large; wide; deep; roomy, indicating plenty of | |
| room for vital organs, and making a large girth just back | |
| of shoulders; the breast bone extending forward so as to | |
| show slightly in front of legs, and extending in a straight | |
| line back to end of breast bone; showing a width of not | |
| less than six inches between forelegs in a large full grown | |
| | 12 |
| Objections—Flat; pinched; narrow at top or bottom; drawn | |
| or tucked underneath between forelegs or at either end of | |
| breast bone; breast bone crooked or not extending | |
| slightly in front of forelegs. | |
| 8. Back and Loin-Broad; straight; or slightly arched; car- | |
| rying same width from shoulder to ham; surface even; | |

smooth, free from lumps, creases or projections; not too long, but broad on top, indicating well sprung ribs; should not be higher at hip than at shoulder, and should fill out at junction with side, so that a straight-edge placed along top of side will touch all the way from point of shoulder to point of ham; should be shorter than lower belly line, 15

- Objections—Narrow; creased back of shoulders; swayed or hollow; dropping below a straight line; humped or wrinkled; too long, or sunfish shaped; loin high, narrow, depressed, or humped up; surface lumpy, creased, ridgy or uneven; width at sides not as much as shoulder and ham.
- 9. Sides and Ribs—Sides full; smooth; firm and deep; earrying size down to belly and evenly from ham to shoulder; ribs long, strong, well sprung at top and botton, . . .

Objections—Flat; thin; flabby; pinched; not as full at bottom as top; drawn in at shoulders so as to produce a crease, or pinched and tucked up, and in, as it approaches the ham; lumpy or uneven surface; ribs flat or too short.

10 Belly and Flank—Wide, straight and full, and dropping as low at flank as bottom of chest, back of foreleg, making a straight line from forelegs to hindlegs; flank full and out even with surrounding portions of body; the belly at that point dropping down on a line with lower line of chest; the loose skin connecting ham and belly, being on line even with bottom of side.

Objections—Belly narrow; pinched; sagging or flabby. Flank thin; tucked up or drawn in.

Objections—Ham narrow; short; thin; not projecting beyond and coming down to hock; cut up too high in crotch or twist; lacking in fullness at top or bottom; lacking in

| | width from stifle straight back; lower fore part thin and flat; straight from root of tail to hock; buttocks light, thin or flabby. Rump flat, narrow and peaked at root of |
|-----|---|
| | tail; too steep. |
| 4.5 | |
| 12. | LEGS AND FRET—Legs medium length; straight; set well apart and squarely under body; tapering; well muscled and wide above knee and hock; below hock and knee round and tapering, capable of sustaining weight of ani- |
| | mal in full flesh without breaking down; bone firm and |
| | of fine texture; pasterns short and nearly upright. Feet |
| | firm; short; tough and free from defects, |
| | Objections-Legs long; slim; coarse; crooked; muscles |
| | small above hock and knee; bone large, coarse; as large |
| | at foot as above knee; pasterns long, slim, crooked or |
| | weak; the hocks turned in or out of straight line; legs |
| | too close together; hoofs long, slim and weak; toes spread- |
| | ing or crooked, or unable to bear up weight of animal |
| | without breaking down. |
| 13. | TAIL—Well set on; small, smooth, tapering, and carried in |
| | a curl, , |
| | Objections-Coarse; long; crooked, or hanging straight |
| | down like a rope. |
| 14. | COAT—Fine; straight; smooth; laying close to and cover- |
| | ing the body well; not clipped; evenly distributed over |
| | body, |
| | Objections—Bristles; hair coarse; harsh; thin; wavy or |
| | curly; swirls; standing up; ends of hair split and brown; |
| | not evenly distributed over all of the body except belly. |
| | Clipped coats should be cut 1.5 points. |
| 15. | Color-Black, with white in face or on lower jaw; white |
| | on feet and tip of tail, and a few small, clear white spots |
| | on body not objectionable, |
| | Objections-Solid black, more than one-fourth white; sandy |
| | hairs or spots; a grizzled or speckled appearance. |
| 16. | Size—Large for age and condition; boars two years old and |
| | over, if in good flesh, should not weigh less than 500 |
| | nounds. Sows same age and condition not less than 450 |

pounds. Boars eighteen months old, in good condition, not less than 400 pounds; sows, 350 pounds. Boars twelve months, not less than 300 pounds; sows, 300 pounds.

POLAND-CHINA SWINE.

| | Boar and sows, six months, not less than 150 pounds. | |
|-----|---|----|
| | Other ages in proportion, | 5 |
| | Objections—Overgrown; coarse; gangling, or hard to fatten | |
| | at any age. | |
| 17. | ACTION and STYLE-Action vigorous; easy; quick and | |
| | graceful. Style, attractive; high carriage; and in males, | |
| | testicles should be of same size, carriage, readily seen, and | |
| | yet not too large, | 4 |
| | Objections—Slow; dull; clumsy; awkward; difficulty in | |
| | getting up when down; low earriage; wabbling walk. | |
| | In males, testicles not easily seen, not of same size or car- | |
| | riage, too large or only one showing. | |
| 18. | Condition—Healthy; skin clear of scurf, scales, or sores; | |
| | soft and mellow to the touch; flesh fine, evenly laid on | |
| | and free from lumps or wrinkles. Hair soft and lying | |
| | close to body; good feeding qualities, | 4 |
| | Objections—Unhealthy; skin scaly, wrinkly, scabby or harsh; | |
| | flabbiness or lumpy flesh; too much fat for breeding. | |
| | Hair harsh, dry and standing up from body; poor feeders; | |
| • | deafness, partial or total. | |
| 19. | | 3 |
| | Objections—Cross, restless, vicious or wild. | |

TAMWORTH SWINE.

Quite recently many specimens of the Tamworth breed of swine have been imported from England into the United States and Canada. At the time this book goes to press the Tamworth breeders have failed to organize an association of their own, although an attempt was made in Massachusetts. The following description from the Breeders' Gazette, October 18th, 1893, gives an excellent idea of the breed, especially as they appeared at the World's Fair, at Chicago:

"If the caricaturist were asked to describe this big, sandyhaired breed of swine as most of them appeared at the Columbian he would probably depict them as all snouts and slab-sides. And the caricature would be so near the truth as almost to miss being a caricature. As a matter of fact the Tamworths shown from Canada were the sensation of the swine show. They were sui generis and so suggestive in their conformation of the thoroughbred "hazel-splitter" as to be the butt of ridicule throughout the showing. It is said that the bacon curers of Canada are strongly urging these swine upon the Dominion pig-breeders. We can readily believe it, for the bacon-curer cares nothing for the hams or shoulders, and the Tamworths have little of either. He wants sides, and the Tams are literally "long" on sides, and deep also. They are tremendously high and deep-sided, remarkably light in hams and shoulders, and prodigiously prodigal of snout and ears. Lean side meat they grow in great quantity, but if it approaches in quality the finer-grained breeds our ideas of form as related to quality of flesh need revision. That such long-nosed, slab-sided swine can be easy feeders is a proposition which no amount of argument could force upon the grower of pigs for the American markets. Mr. Thomas Bennett, Rossville, Ill., was showing an entirely different type of Tamworths. Ten years ago he personally made an importation of this breed, selecting a shorter-legged, wider-backed, more compact type, and he has been improving them ever since, having imported another boar for this purpose about two years ago. The type he now shows is that most in fayor in American feed-lots, and as the judge, Mr. F. D. Coburn, was looking for the kind which more nearly meets modern ideas in pork-making, Mr. Bennett's pigs came in for chief recognition. The story of the showing is a brief one. Exhibitors were Thomas Bennett, Rossville, Ill.; James Calvert, Thedford, Ont., and John Bell, Amber, Ont."

VICTORIA SWINE.

Detailed description of Victoria Swine, as adopted by the Victoria Swine Breeders' Association, George F. Davis, Secretary, Dyer, Indiana, at their annual meeting, November, 1888, as an aid to Judges at Fairs, in place of the score card, and to assist breeders to establish uniformity.

DISQUALIFICATIONS.

Color: Other than white or creamy white, with occasional dark spots in skin.

FORM: Crooked jaws or deformed face; crooked or deformed legs; large, coarse, drooping ears.

CONDITION: Excessive fatness; barrenness; deformity in any part of the body.

PEDIGREE: Not eligible for record.

POINTS. DETAILED DESCRIPTION.

- 1. Color—White, with occasional dark spots in the skin.
- 2. HEAD AND FACE—Head rather small and neat. Face medium dished and smooth; wide between eyes; tapering from eyes to nose.
- 3. EYES-Medium size, prominent, bright; clear and lively in young and quiet expression in aged animals.
- 4. Ears—Small, thin, fine, silky; upright in young pigs, pointing forward and slightly outward in aged animals.
 - 5. NECK-Medium wide, deep, short, well arched and full at top.
- 6. Jown-Medium full, nicely rounded, neat and free from loose, flabby fat.
- 7. SHOULDERS—Broad, deep and full, not higher than line of back, and as wide as top of back.
- 8. CHEST—Large, wide, deep and roomy, with large girth back of shoulders.
- 9. Back and Loin—Broad, straight or slightly arched, carrying same width from shoulder to ham; level and full at loin; sometimes slightly higher at hip than at shoulders.
- 10. RIBS AND SIDES—Ribs well sprung at top; strong and firm; sides deep, full, smooth and firm; free from creases.
 - 11. Belly and Flank-Wide; straight and full; as low or slightly

lower at flank than at chest. Flank full and nearly even with sides.

- 12. Hams and Rump—Hams long; full and wide; nicely rounded; trim and free from loose fat. Buttocks large and full; reaching well down to hocks. Rump slightly sloped from end of loin to root of tail,
- 13. LEGS AND FERT—Legs short; set well apart and firm; wide above knee and hock tapering below. Feet firm and standing well up on toes.
 - 14. TAIL-Small; fine and tapering; nicely curled.
 - 15. COAT—Fine and silky; evenly covering the body.
- 16. Size—Boars two years old and over when in good condition should weigh not less than 500 pounds; sow same age and condition, 450 pounds. Boars twelve months old not less than 300 pounds; sows in good flesh 300 pounds. Pigs five to six months old 140 to 160 pounds.
 - 17. ACTION—Easy and graceful but quiet.
- 18. CONDITION—Healthy; skin clean, and white or pink in color; free from scurf; flesh firm and evenly laid on.
 - 19. DISPOSITION—Quiet and gentle.

SHETLAND PONIES.

N. B.—The following letter will be found to contain several valuable suggestions in regard to judging Shetland ponies:

AMERICAN SHETLAND PONY CLUB.

SECRETARY'S OFFICE, La Fayette, Iud., April 18, 1893.

FRANK A. LOVELOCK, ESQ.:

DEAR SIR:—In answer to your favor of 10th instant will say, the maximum height of ponies, as you will see by the rules, is 46 inches. The smaller the pony, if he is blocky and well formed, the higher he will be considered in class. Some of the finest Shetlands in the country, and the highest priced are from 28 to 31 inches high, and weigh about 200 pounds. The type of Shetland is as far from the thoroughbred horse type as possible to get. The pony must be square-built, strong, large limbs, small head and ears. All ponies on the thoroughbred type are undesirable. It is said the pure-bred Shetland cannot kick over eight inches from the ground. They are intended for children's pets, and we do not want to type a pony that can stand and kick a man's hat off, as can some of the Welch Exmoor ponies. Ponies of 44 to 45 inches high should weigh from 350 to 400 pounds.

Yours respectfully,

MORTIMER LEVERING, Secretary.

SHORT-HORN CATTLE.

A few days before this book went into the hands of the binder, the editor found on the agricultural page of the Philadelphia Public Ledger, the following standard of excellence for Short-Horn Cattle, as established by the Massachusetts State Board of Agriculture, for use at the Fairs of that State. Without wishing to criticise, the editor would say that he prefers for his own use the standard of excellence for Short-Horn Cattle as found on pages 44, 45 and 46 of this work.

| | bright and clear—"prominent" from an accumulation of | |
|-----|--|----|
| | "adeps" in the back part of its socket, which indicates a | |
| | tendency to lay on fat, "bright" as an evidence of a good | |
| | disposition, "clear" as a guaranty of the animal's health; | |
| | whereas a dull, sluggish eye belongs to a slow feeder, and | |
| | a wild, restless eye betrays an unquiet, fitful temper, | |
| 4. | Horns-Light in substance and waxy in color, and symmetri- | |
| | cally set on the head; the ear large, thin, and with con- | |
| | siderable action. | |
| 5. | NECK-Rather short than long, tapering to the head, clean | |
| - | in the throat, and full at its base, thus covering and filling | |
| | out the points of the shoulders, | |
| 6. | CHEST—Broad from point to point of the shoulders, deep | |
| | from the anterior dorsal vertebra to the floor of the ster- | |
| | num, and both round and full just back of the elbows, | |
| | sometimes designated by the phrase "thick through the | |
| | heart." These are unquestionably the most important | |
| | points in every animal, as constitution must depend on | |
| | their perfect development, and the ample room thus af- | |
| | forded for the free action of the heart and lungs, | 1. |
| 7. | BRISKET-However deep or projecting, must not be con- | _ |
| • • | founded with capacity of chest, for though a very attrac- | |
| | tive and selling point, it, in reality, adds nothing to the | |
| | space within, however it may increase the girth without. | |
| | It is, in fact, nothing more nor less than a muscular adi- | |
| | pose substance, attached to the anterior portion of the | |
| | sternum, or breast bone, and thence extending itself back. | |
| | This form, however, of the brisket indicates a disposition | |
| | to lay on fat generally throughout the frame, and in this | |
| | point of view is valuable, | |
| 8. | SHOULDER-Where weight, as in the Shorthorn, is the | |
| | object, should be somewhat upright and of good width at | |
| | the points, with the blade-bone just sufficiently curved to | |
| | blend its upper portion smoothly with the crops, | |
| 9. | CROPS-Must be full and level with the shoulders and back, | |
| | and is, perhaps, one of the most difficult points to breed | |
| | right in a Shorthorn, | 8 |
| 10. | BACK, LOIN AND HIPS-Should be broad and wide, forming | |
| | a straight and even line from the neck to the setting on of | |
| | the tail, the hips or hooks round and well covered, | 8 |
| | | |

| 11. | RUMPS-Laid up high, with plenty of flesh on their extremi- | |
|-----|---|----|
| | ties, | 5 |
| 12. | Pelvis-Should be large, indicated by the width of the hips | |
| | (as already mentioned) and the breadth of the twist, | 2 |
| 13. | Twist-Should be so well filled out in its "seam" as to form | |
| | nearly an even and wide plain between the thighs, | 3 |
| 14. | QUARTERS-Long, straight and well developed downwards, | 5 |
| 15. | CARCASS-Round, the ribs nearly circular and extending | |
| | well back, | 4 |
| 16. | Flanks-Deep, wide and full in proportion to condition, . | 3 |
| | LEGS-Short, straight and standing square with the body, | 2 |
| 18. | PLATES-Of the belly strong, and thus preserving nearly a | |
| | straight underline, | 3 |
| 19. | TAIL-Flat and broad at its root, but fine in its cord, and | |
| | placed high up and on a level with the rumps, | 2 |
| 20. | CARRIAGE—Of an animal gives style and beauty; the walk | |
| | should be square and the step quick, the head up, | 2 |
| 21. | QUALITY—On this the thriftness, the feeding properties and | |
| | the value of the animal depend; and upon the touch of | |
| | this quality rests, in a good measure, the grazier's and the | |
| | butcher's judgment. If the "touch" be good, some defi- | |
| | ciency of form may be excused; but if it be hard and stiff, | |
| | nothing can compensate for so unpromising a feature. In | |
| | raising the skin from the body, between the thumb and | |
| | finger, it should have a soft, flexible and substantial feel, | |
| | and when beneath the outspread hand it should move | |
| | easily with it, and under it, as though resting on a soft, | |
| | elastic, cellular substance; which, however, becomes | |
| | firmer as the animal ripens. A thin papery skin is objec- | |
| | | 15 |
| 22. | COAT-Should be thick, short and mossy, with longer hair | |
| | in winter, fine, soft and glossy in summer, | 2 |
| 23. | UDDER-Pliable and thin in its texture, reaching well for- | |
| | ward, roomy behind, and the teats standing wide apart, | |
| | and of convenient size, | 3 |
| | PERFECTION, | 00 |
| | | 50 |

THE BULL,

The points desirable in the females are generally so in the male,

but must, of course, be attended by that masculine character which is inseparable from a strong, yigorous constitution. Even a certain degree of coarseness is admissible, but then it must be so exclusively of a masculine description as never to be discovered in the females of his get.

In contradistinction to the cow, the head of the bull may be shorter, the frontal bone broader, and the occipital flat and stronger, that it may receive and sustain the horn, and this latter may be excused if a little heavy at the base, so its upward form, its quality and color be right. Neither is the looseness of the skin attached to and depending from the under jaw to be deemed other than a feature of the sex, provided it is not extended beyond the bone, but leaves the gullet and throat clean and free from dewlap.

The upper portion of the neck should be full and muscular, for it is an indication of strength, power and constitution. The spine should be strong, the bones of the loin long and broad, and the whole muscular system wide and thoroughly developed over the entire frame.

TUNIS OR BROAD-TAILED SHEEP.

Standard of Excellence for Tunis or Broad-Tailed Sheep, as adopted by the American Tunis Sheep Breeders' Association, G. A. Guilliams, President, and M. A. Bridges, Secretary, Fincastle, Indiana. [This standard was sent to the editor just as this book was ready for the binder, hence could not appear in the sheep department.]
